### METAL MOSAIC and METAL TILES Cutting and Cleaning

#### Cutting

The Metal Mosaic & Tile have 1mm Stainless Steel Sheet Laminated on Porcelain Tile. Cutting can be performed by the use of standard Wet-Saw machine installed with a continuous high quality diamond blade as per attached pictures. (Such as the RUBI DU-200 or RUBI DS-250-L; see <[www.rubi.com](http://www.rubi.com)>) Cutting must be performed slowly at all time to avoid high temperature build up which could discolour the metal surface.

#### Cleaning

We recommend using 3M Stainless Steel Cleaner and Polisher. For normal cleaning, spray the area lightly, clean and finally polish to the desired shine using a clean dry cloth. For removing light scratches on the Metal Mosaic, you can use same product but by using a steel wool pad, gently rubbing in a circular motion firstly, then wipe clean with a damp cloth. 3M can be found in most local supermarket or hardware shops.
