Department stores/shops

Gerflor designer of future trends and tomorrow's

N° 3 in the world

N°2 in Europe

The widest range for every market

Sports & Leisure

Education

Housing

Offices

Healthcare

Industry

Restaurants

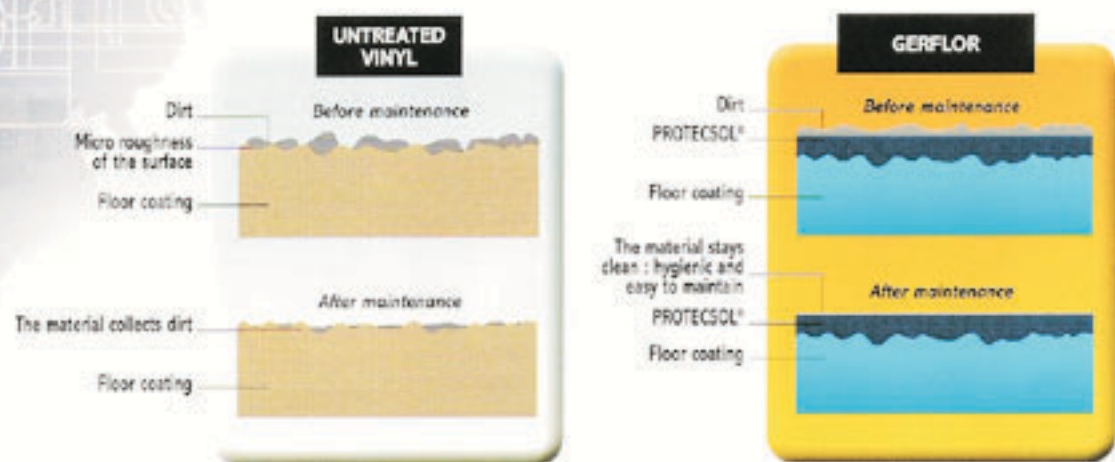

Durability, hygiene and maintenance are three major priorities in the development of any Gerflor contract flooring range. With wearlayer in pure PVC or with limited content of fillers, with thickness of wearlayer above most requirements, Gerflor contract ranges are providing extreme durability to most usage. In order to answer any specific requirement of each market segment (healthcare, education, housing, industry, offices, shops,...), Gerflor has developed several exclusive surface treatment, adapted to each product type to ease maintenance :

Protecsol®

Regular UV-cured polyurethane surface treatment

This unique polyurethane treatment in the world protects the floorcovering and doesn't require application of an acrylic emulsion over complete lifetime of the products. This is due to the formulation of the Protecsol® treatment, its application on wearlayer made of pure PVC, a regular and continuous application on the wearlayer and the thickness of treatment applied. It significantly eases maintenance and reduces maintenance costs and labour.

PROTECSOL® Regular uv-cured polyurethane surface treatment

PU treatment

Polyurethane treatment

This PU treatment is applied on the top-of-the-range flexible homogeneous flooring, the Transit Acoustic range and the Nera ranges. It eases maintenance and avoid the application of an acrylic emulsion after installation. Application of an emulsion is not required so long hygienic and aesthetic characteristics are estimated appropriate by maintenance staff.

OTHER TREATMENT : Sanosol®

Fungicidal and bacteriostatic treatment

This treatment is applied in the total thickness of every Gerflor contract flooring (except flexible homogeneous range) to ensure perfect and durable hygiene. Similar benefit is provided on flexible homogeneous flooring due to the special compacting process.

Environment friendly

Ease of maintenance

Design

Static-conductive

← Flooring suitable for medium to heavy traffic

Homogeneous flooring

Recommended for schools, hospitals, shops where resistance to high traffic is required. A wide range of directional and non directional design.

Homogeneous Mipolam ranges

PU treatment

Homogeneous flooring

(Classic Imperial, Architecton...)

Compact flooring

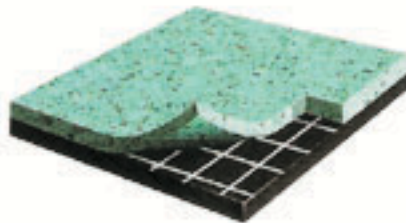

Ideal for high to intense traffic areas. High resistance to heavy rolling loads and ease of maintenance.
